About the College Board The College Board is a mission-driven not-for-profit organization that connects students to college success and opportunity.

### **AP Chemistry Course and Exam Description - College Board**

A chemical formula is a way of presenting information about the chemical proportions of atoms that constitute a particular chemical compound or molecule, using chemical element symbols, numbers, and sometimes also other symbols, such as parentheses, dashes, brackets, commas and plus (+) and minus (âˆ’) signs. These are limited to a single typographic line of symbols, which may include ...

The oxidation state, sometimes referred to as oxidation number, describes the degree of oxidation (loss of electrons) of an atom in a chemical compound. Conceptually, the oxidation state, which may be positive, negative or zero, is the hypothetical charge that an atom would have if all bonds to atoms of different elements were 100% ionic, with no covalent component.

### **Oxidation state - Wikipedia**

Designers and engineers are challenged every day to improve designs and manufacturing processes. By enabling the use of a wider range of materials in product design, 3M tapes and adhesives allow enhanced aesthetics, lighter weight constructions and improved end performance.

4.1.1. Closing of the mould. The first step in the steam-chest moulding cycle is the closing of the mould.

4.1.2. Filling of the mould. Foamed beads are drawn by air pressure out of a container and blown into the mould by an injector, which usually functions according to the venturi-principle.

## **Past and present developments in polymer bead foams and**

This paper reviews the current pathways for recycling of solid plastic waste, via both mechanical and chemical recycling. The predominant industrial technologies, design strategies and recycling examples of specific waste streams are reviewed.

A new chemical process is developed to prepare strongly ferromagnetic SmCo<sub>5</sub> nanoparticles (NPs) via controlled reduction of SmCo<sub>5</sub>O<sub>7</sub> multipods. The 200 nm SmCo<sub>5</sub> NPs embedded in polyethylene glycol are aligned magnetically and show the room temperature coercivity of 49.2 kOe. The synthetic method has also been extended to prepare ferromagnetic Sm<sub>2</sub>Co<sub>17</sub> and Sm<sub>2</sub>Fe<sub>17</sub>N<sub>3</sub> NPs.
