Computational chemistry is a branch of chemistry that uses computer simulation to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids. It is necessary because, apart from relatively recent results concerning the hydrogen molecular ion (dihydrogen cation ...

Study Tips 1. Read the suggested readings before coming to class and record the main ideas. 2. After each lecture, summarize the major ideas and concepts in your notes within 24 hours of class. 3. Annotate these summaries from your study of the textbook 4. Work the problems independently 5. Master the material from each lecture before going to the next one.

The history of chemistry represents a time span from ancient history to the present. By 1000 BC, civilizations used technologies that would eventually form the basis of the various branches of chemistry. Examples include extracting metals from ores, making pottery and glazes, fermenting beer and wine, extracting
