A circle of latitude on Earth is an abstract east-west circle connecting all locations around Earth (ignoring elevation) at a given latitude.. Circles of latitude are often called parallels because they are parallel to each other; that is, any two circles are always the same distance apart. A location's position along a circle of latitude is given by its longitude.

In mathematics, hyperbolic geometry (also called Bolyai-Lobachevskian geometry or Lobachevskian geometry) is a non-Euclidean geometry. The parallel postulate of Euclidean geometry is replaced with: . For any given line  $R$  and point  $P$  not on  $R$ , in the plane containing both line  $R$  and point  $P$  there are at least two distinct lines through  $P$  that do not intersect  $R$ .

Cartesian graph paper is the most popular form of graph paper in use. This type of graph paper is identified

by its two perpendicular sets of lines forming a square grid.

Free Plane Geometry calculator - Calculate area, perimeter, sides and angles for triangles, circles and squares step-by-step

### **Plane Geometry Calculator - Symbolab**

Notice that we added in the vector  $(\text{vec } r - \overrightarrow{\{r_0\}})$  which will lie completely in the plane. Also notice that we put the normal vector on the plane, but there is actually no reason to expect this to be the case.
