On the Origin of Species by Means of - Darwin Online

The first module of the course introduces Charles Darwin's revolutionary concept of a "tree of life" depicting the evolution of all life from a common ancestor; how evolutionary trees depict relationships among organisms; and how new species are formed.

Teaching Evolutionary Science - Introduction and Darwin's

Introduction to Coral reefs. Coral reefs (1842) was Darwin's first monograph. It addressed an immensely ambitious subject. It is perhaps second only to the Origin for its masterful deduction from observation, leading to the construction of a theory that if proved would exceed all previous attempts and virtually solve its subject. The power of Darwin's monograph was well recognised by his ...
