powerful statistical and data mining methods and tools in life science as well as computer science and (ii) promote the standardization of data analysis and interpretation in genomics and proteomics.

FUNDAMENTALS OF DATA MINING IN GENOMICS AND PROTEOMICS

Data mining is the search for hidden trends within large sets of data. Data mining approaches are needed at all levels of genomics and proteomics analyses. These studies can provide a wealth of information and rapidly generate large quantities of data from the analysis of biological specimens from healthy and diseased tissues.
