Data modeling is different from class modeling because it focuses solely on data. It is important to do data modeling and to develop the ERD (Entity Relationship Diagram) to insure that the relational database is properly designed.

### **Data Modeling Basics - Administration**

To put this in the context of the relational database, the data model is used to design the relational tables. The functional model is used to design the queries which will access and perform operations on those tables. 1.1.3 Components of A Data Model The data model gets its inputs from the planning and analysis stage.

data model) and the use of that language to create a story about the world (the database model). The basics of the English language are constructs such as nouns, verbs, adjectives, adverbs, prepositions, etcetera, plus the rules those constructs use (similar to a data model language).

### **Making choices with data models and database models**

A logical data model or logical schema is a data model of a specific problem domain expressed independently of a particular database management product or storage technology (physical data model) but in terms of data structures such as relational tables and columns, object-oriented classes, or XML tags.
