Typical Steel Connections - Faculty of Engineering and

Structural design is the methodical investigation of the stability, strength and rigidity of structures. The basic objective in structural analysis and design is to produce a structure capable of resisting all applied loads without failure during its intended life. The primary purpose of a structure is to transmit or support loads.

115 - Food and Agriculture Organization

The American Concrete Institute (ACI) is a leading authority and resource worldwide for the development and distribution of consensus-based standards, technical resources, educational programs, certification programs, and proven expertise for individuals and organizations involved in concrete design, construction, and materials, who share a commitment to pursuing the best use of concrete.

American Concrete Institute

The design of a connection or interface follows the same process as the design of a structure, and indeed, the ability to visualize the system, as also discussed on page 8-6, is a critical skill.

FUNdaMENTALS of Design - MIT

The protection of structures against explosive loadings T. Åodygowski and P.W. Sielicki ... focus of retrofit design for increase the blast resistance of masonry walls are discussed. The structure ... bolted or adhesively bonded to the structure (Fig.2b). Against ballistic penetration the use of arresting nets and screens is effective.
