The threats dragonflies face are almost exclusively caused by quantitative and qualitative loss of habitat. This basically means that protecting a dragonfly spe-

Atlas of the European dragonflies and damselflies due to

Odonata is an order of carnivorous insects, encompassing the dragonflies and the damselflies. The Odonata form a clade, which has existed since the Triassic. Dragonflies are generally larger, and perch with their wings held out to the sides; damselflies have slender bodies, and hold their wings over the body at rest.

Odonata - Wikipedia

The Odonata are divided into two suborders: Zygoptera (damselflies) -- front and hind wings are similar in shape ; Anisoptera (dragonflies) -- hind wings are broader near the base than the front wings ; Distribution: Common in fresh-water habitats worldwide.
