motion of a system completely for the purpose of predicting future motion. For a system of planets the state is simply the positions and the velocities of the planets. We call the set of all possible states the state space. A common class of mathematical models for dynamical systems is ordinary differential equations (ODEs).

### **Modeling And Simulation Of Dynamic Systems**

Modelling a Dynamical System Models are mathematical representations of system dynamics Models allow the dynamics to be simulated and analyzed, without physically building the system. Models are simplified form of the system and hence are never "exact"!
