Abstract: This theory deals with "Equilibrium and Orbital Dynamics of the Solar System and beyond". In this paper, at first, I will give all the calculations and equations for how the equilibrium of all the planets in our solar system is achieved without flying out of the orbit. Secondly, this paper deals with the

Charge-Carrier Dynamics of Perovskite Solar Cells Jiangjian Shi, 1Yiming Li, 2Yusheng Li, 1,2Dongmei Li, Yanhong Luo, Huijue Wu, and Qingbo Meng1,2 * Despite the rapid development in the past years, performances of the perovskite solar cell are still limited by the photovoltage and the factor that are mainly determined by the charge-carrier dynamics.

Typical values of the solar wind beyond 1 a.u. are computed. The study of a shock wave formation gives a distance of occurrence at 15-500 a.u. corresponding to 3-0.1 gamma interstellar magnetic field, respectively.

The basic properties of the two- and three-body problems are reviewed together with applications to observed phenomena in the solar system. A study of the properties of the planetary disturbing function is presented showing how the dynamics of resonances can be understood using a pendulum approximation.
