

economic and financial modeling pdf

Financial modeling is the task of building an abstract representation (a model) of a real world financial situation. This is a mathematical model designed to represent (a simplified version of) the performance of a financial asset or portfolio of a business, project, or any other investment.. Typically, then, financial modeling is understood to mean an exercise in either asset pricing or ...

Economic growth is the increase in the inflation-adjusted market value of the goods and services produced by an economy over time. It is conventionally measured as the percent rate of increase in real gross domestic product, or real GDP.. Growth is usually calculated in real terms - i.e., inflation-adjusted terms - to eliminate the distorting effect of inflation on the price of goods produced.

This study contributes to understanding the role of financial development on economic growth theoretically and empirically. In the theoretical part of the paper, by developing a Solow-Swan growth model augmented with financial markets in the tradition of Wu, Hou, and Cheng (2010), we show that debt from credit markets and equity from stock markets are two long run determinants of GDP per capita.
