

### **el enves de la pdf**

En los helechos, un soro es una agrupación de esporangios localizado en los bordes o enveses de una fronda fértil en helechos verdaderos y en la superficie de hongos y líquenes.. En muchas especies de helechos los soros están protegidos por una cubierta llamada indusio. Los soros se forman en la generación de esporofitos; los esporangios dentro producen esporas haploides.
