

electroplating plating polishing anodizing pdf

Electroplating is a process that uses an electric current to reduce dissolved metal cations so that they form a thin coherent metal coating on an electrode. The term is also used for electrical oxidation of anions on to a solid substrate, as in the formation of silver chloride on silver wire to make silver/silver-chloride electrodes. Electroplating is primarily used to change the surface ...

Surface Preparation of Metals Prior to Plating - NMFRC

Dr. Dmitri Kopeliovich Surface preparation is a series of cleaning treatments of the substrate surface prior to the coating operation intended for ensuring strong and uniform adhesion of the coating to the substrate.. Adhesion is a state of bonding a coating to the substrate surface.. Bonding strength (adhesive strength) is a tensile stress (tensile load applied to the unit bonding area ...
