In mathematics, an ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and its derivatives. The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable.. A linear differential equation is a differential equation that is defined by a ...

In mathematics, a differential-algebraic system of equations (DAEs) is a system of equations that either contains differential equations and algebraic equations, or is equivalent to such a system. Such systems occur as the general form of (systems of) differential equations for vector-valued functions  $x$  in one independent variable  $t$ ,  $(\dot{x}, x) = f(t, x, \dot{x})$  where  $f$  is a vector of dependent ...
