Proteins are assembled from amino acids using information encoded in genes. Each protein has its own unique amino acid sequence that is specified by the nucleotide sequence of the gene encoding this protein. The genetic code is a set of three-nucleotide sets called codons and each three-nucleotide combination designates an amino acid, for example AUG (adenine-uracil-guanine) is the code for ...

In the last two decades, the widespread application of genetic and genomic approaches has revealed a bacterial world astonishing in its ubiquity and diversity. This review examines how a growing knowledge of the vast range of animalâ€“bacterial interactions, whether in shared ecosystems or intimate symbioses, is fundamentally altering our understanding of animal biology.

Animals in a bacterial world, a new imperative for the

Abstract. Based on the methods outlined in Determining the Ark Kinds (Lightner et al. 2011), information on the class Mammalia was evaluated in an attempt to get a realistic estimate of what mammalian kinds would have been represented on the Ark. Examining information on extant species (those alive today), it was estimated that they represent 137 created kinds.

Mammalian Ark Kinds | Answers in Genesis

The theory of evolution is a naturalistic theory of the history of life on earth (this refers to the theory of

evolution which employs methodological naturalism and is taught in schools and universities).

Merriam-Webster's dictionary gives the following definition of evolution: "a theory that the various types of animals and plants have their origin in other preexisting types and that the ...
