## Statistical Ph I - Department of Physics

Thermodynamics is the branch of physics concerned with heat and temperature and their relation to energy and work. The behavior of these quantities is governed by the four laws of thermodynamics, irrespective of the composition or specific properties of the material or system in question. The laws of thermodynamics are explained in terms of microscopic constituents by statistical mechanics.

## Thermodynamics - Wikipedia

It's basically a set of lecture notes on advanced thermodynamics and statistical mechanics. The list of subject includes classical thermodynamics, thermodynamics of the atmosphere, heat engines, specific heat capacities of solids, liquids, gases and more.

Thermodynamics. Thermodynamics is the physical science that studies the effects of temperature variations and heat transfer on a material, especially as the bodies change state as from solid to liquid and back again, as plastics do during plastic processing and as heat is transferred from the injection-molded plastic part into the cooling system of the mold.
