6 Chapter 1 "Introduction to Fluid Mechanics by deformation. In fluid mechanics, pressure is usually the most important type of compressive stress, and will shortly be discussed in more detail. 2. The second type of stress, shown in Fig. 1.3(b), acts tangentially to the surface; it is called a shear stress τ , and equals F/A , where F is the tangential force and A is the area on which it acts.

First published in 1967, Professor Batchelor's classic text on fluid dynamics is still one of the foremost texts in the subject. The careful presentation of the underlying theories of fluids is still timely and applicable, even in these days of almost limitless computer power.
