

linear solution pdf

A linear equation has only one solution. The solution of a linear equation is equal to the value of the unknown variable that makes the linear equation true. Example: $x + 2 = 4$. The value of the unknown variable that makes the equation true is 2: $2 + 2 = 4$. $x = 2$. There are different forms of writing a linear equation.

LINEAR EQUATIONS - El Paso Community College

SOLVING LINEAR EQUATIONS Goal: The goal of solving a linear equation is to find the value of the variable that will make the statement (equation) true. Method: Perform operations to both sides of the equation in order to isolate the variable. Addition and Subtraction Properties of Equality: Let a , b , and c represent algebraic expressions. 1.

Solving Linear Programs 2 In this chapter, we present a systematic procedure for solving linear programs. This procedure, called the simplex method, proceeds by moving from one feasible solution to another, at each step improving the value

of the solution. A linear system composed of three linear equations in three variables x , y , and z has the general form (2) Just as a linear equation in two variables represents a straight line in the plane, it can be shown that a linear equation $ax + by + cz = d$ (a , b , and c not all equal to zero)
