The equation  $2^{2x-1} = 8^x$  has to be solved for  $x$ . Now, if the base is the same, the exponents can be equated. It is possible to write 8 as a power of 2.  $8 = 2^3$

In this section we solve linear first order differential equations, i.e. differential equations in the form  $y' + p(t)y = g(t)$ . We give an in depth overview of the process used to solve this type of differential equation as well as a derivation of the formula needed for the integrating factor used in the solution process.

In this section we do a partial derivation of the wave equation which can be used to find the one dimensional displacement of a vibrating string. In addition, we also give the two and three dimensional version of the wave equation.

The class Math contains methods for performing basic numeric operations such as the elementary exponential, logarithm, square root, and trigonometric functions. Unlike some of the numeric methods of class StrictMath, all implementations of the equivalent functions of class Math are not defined to return the bit-for-bit same results. This relaxation permits better-performing implementations ...
