The immune system is a host defense system comprising many biological structures and processes within an organism that protects against disease. To function properly, an immune system must detect a wide variety of agents, known as pathogens, from viruses to parasitic worms, and distinguish them from the organism's own healthy tissue. In many species, the immune system can be classified into ...

A familiar example is a playground swing, which acts as a pendulum. Pushing a person in a swing in time with the natural interval of the swing (its resonant frequency) makes the swing go higher and higher (maximum amplitude), while attempts to push the swing at a faster or slower tempo produce smaller arcs.

Aging induces physiological changes in skeletal muscle, including defective mitochondrial energetics, atrophy, loss of strength and power, and insulin resistance. Exercise training is a potent countermeasure to improve glucose regulation by increasing skeletal muscle insulin sensitivity and mitochondrial respiratory capacity and warding off aging muscle atrophy.
