Division is one of the four basic operations of arithmetic, the others being addition, subtraction, and multiplication.. At an elementary level the division of two natural numbers is â€“among other possible interpretationsâ€“ the process of calculating the number of times one number is contained within another one.: 7 This number of times is not always an integer, and this led to two different ...

In mathematics, orthogonality is the generalization of the notion of perpendicularity to the linear algebra of bilinear forms. Two elements u and v of a vector space with bilinear form B are orthogonal when $B(u, v) = 0$. Depending on the bilinear form, the vector space may contain nonzero self-orthogonal vectors. In the case of function spaces, families of orthogonal functions are used to form a ...
