

solubility curves and phase pdf

Solubility is the property of a solid, liquid or gaseous chemical substance called solute to dissolve in a solid, liquid or gaseous solvent. The solubility of a substance fundamentally depends on the physical and chemical properties of the solute and solvent as well as on temperature, pressure and presence of other chemicals (including changes to the pH) of the solution.

For the use of this term in mathematics and physics, see phase space.. A phase diagram in physical chemistry, engineering, mineralogy, and materials science is a type of chart used to show conditions (pressure, temperature, volume, etc.) at which thermodynamically distinct phases occur and coexist at equilibrium

A water-compatible variant of a click-like polymerization between alkynoates and secondary amines to form aminoacrylate synthetic polyethylene glycol (PEG) based hydrogels was developed. Cell culture experiments indicate cytocompatibility of these gels with >90 % viability retained in THP-1 and NIH/3T3 cells after 72 hours in culture.
