In economics, a cardinal utility function or scale is a utility index that preserves preference orderings uniquely up to positive affine transformations. Two utility indices are related by an affine transformation if for the value u of one index u , occurring at any quantity of the goods bundle being evaluated, the corresponding value v of the other index v satisfies a relationship of the form

In probability theory, especially in mathematical statistics, a location-scale family is a family of probability distributions parametrized by a location parameter and a non-negative scale parameter. For any random variable whose probability distribution function belongs to such a family, the distribution function of $= +$ also belongs to the family (where $=$ means "equal in distribution" that ...
