## Lab Configuring Ipv6 Static And Default Routes

**lab - configuring ipv6 static and default routes ...** - lab - configuring ipv6 static and default routes (instructor version - optional lab) instructor note: red font color or gray highlights indicate text that appears in the instructor copy only. optional activities are designed to enhance understanding and/or to provide additional practice. **ipv6 hands-on lab - cabrillo college** - lab 1 ipv6 stateless auto-configuration (slaac) your plan is to test the plug and play behaviour of ipv6. so you only assigned the ipv6 unique local address on r4 interface facing h1 and see if you get an ipv6 address assigned automatically on h1 from r4 (refer to slide 39 for ipv6 addressing example) **lab - configuring ipv6 addresses on network devices** - open the local area connection properties window on pc-a. select internet protocol version 6 (tcp/ipv6) and click properties . lab - configuring ipv6 addresses on network devices **lab - configuring basic single-area ospfv3** - with ipv6, it is common to have multiple ipv6 addresses configured on an interface. the network statement has been eliminated in ospfv3. ospfv3 routing is enabled at the interface level instead. a. issue the `ipv6 ospf 1 area 0` command for each interface on r1 that is to participate in ospfv3 routing. `r1(config)# interface g0/0` **lab configuring and verifying ipv6 acls - itexamanswers** - numbered acls are no longer used with ipv6. to apply an ipv6 acl to a vty interface, you use the new `ipv6 traffic-filter` command. the `ipv6 access-class` command is still used to apply an ipv6 acl to interfaces. in this lab, you will apply ipv6 filtering rules and then verify that they are restricting access as expected. you **lab configuring ipv6 static and default routes** - in this lab, you will configure the entire network to communicate using only ipv6 addressing, including configuring the routers and pcs. you will use stateless address auto-configuration (slaac) for configuring **lab - configuring multiarea ospfv3 - itexamanswers** - issue the `ipv6 ospf 1 area area-id` command for each interface on r1 that is to participate in ospfv3 routing. the loopback interfaces are assigned to area 1 and the serial interface is assigned to area 0. **lab - configuring basic eigrp for ipv6** - with eigrp for ipv6, a router id is required on each router or the routing process does not start. the eigrp for ipv6 routing process uses a shutdown feature. lab - configuring basic eigrp for ipv6
