## Lab Five Cell Respiration Answers

**lab #5 comparing living plant and animal cells** - lab #5 - comparing living ... name the 2 parts of the cell that you saw in the plant cell that you did not see in the animal cell. 3. how do you think the different jobs (functions) or the cells affect their shape (structure)? sketches: label at least 3 organelles on the 10x and 40x sketches. label magnification on each sketch. **experiment 5 - colby college** - experimental lab work, and a written report summarizing that lab work. electrochemical theory needed for professor interview an electrochemical (or galvanic) cell, also known as a battery, is a device that produces an electric current as the result of an electron transfer reaction. such electron transfer reactions are **lab 4: the care and feeding of the microscope lab 5: cell ...** - biology i - labs 4 and 5: microscope / cell structure compound light microscope (lm) • it has multiple lenses and uses visible light as the source of illumination. • visible light is passed through a specimen and then through glass lenses that magnify the image. • the image from the objective lens is remagnified by the ocular lens. • total magnification of a specimen = **lab five: fungi - napa valley college pages** - through this relationship fungi contribute to plant growth and survival by obtaining nutrients and water through a vast array of hyphae. fungal bodies are made of thread-like structures called hyphae that grow through the growth media - dead wood, leaf mold, soil, skin, glass, etc. each cell is surrounded by a cell wall made **sharing lab exercises and ideas in biochemistry ...** - cell cycle & cell death 18 tissues & cancer 21. grading: ny times articles, primary literature analysis, 3 exams . lecture = 60%, lab = 40% text: alberts, et essential cell biology (2010) lab schedule (spring 2009) intro, safety and the lab report separation of proteins based on charge sds page analysis of proteins enzyme extraction and analysis **lab 5 - connective tissue connective tissue** - 5. within connective tissue, several types of cells, primarily leukocytes (white blood cells), can be found; some are long-lived in the tissue (resident cells) while others are transient and short-lived(wandering cells). lab 5 - connective tissue **lab #5: osmosis, tonicity, and concentration.** - lab #5: osmosis, tonicity, and concentration. background. the internal environment of the human body consists largely of water-based solutions. a large number of different solutes may be dissolved in these solutions. since movement of materials across cell membranes is heavily influenced by both differences in the **insect cell culture/baculovirus expression - yale university** - the high five cell line is derived from ovarian cells of the cabbage looper trichoplusia ni. high five cells can be used for all of the same experiments, but produce higher levels of recombinant protein than sf9 or sf21 cells. our lab uses sf9 or high five cells in monolayer culture for generation of high-titer stocks of **gen bio 1 lab #5: diffusion and osmosis - brazosport** - 5. the resulting "cell" should be short, fat, and plump... not long and skinny. 6. let everyone in your group observe this "cell." 7. put 50 ml of syrup in 100-ml beaker. \*\*recycle - keep for next lab\*\* 8. drop the "cell" in the syrup. 9. wait 30 minutes and observe your "cell". **experiment 21 voltaic and electrolytic cells - roanoke college** - experiment 21 voltaic and electrolytic cells rev 1/2013 introduction: a voltaic cell is a specially prepared system in which an oxidation-reduction reaction occurs spontaneously. the oxidation and reduction half-reactions are separated so that the current must run through an external wire. **laboratory safety guidance - osha** - of federal osha. there are twenty-five states and two u.s. territories (puerto rico and the virgin islands) that have their own osha-approved occupational safety and health standards, which may be different from federal standards, but must be at least "as effective as" the federal standards. contact your local or state osha office for further **lab 4. diffusion and osmosis in selectively permeable ...** - lab 4: diffusion and osmosis (revised fall 2009) lab 4 - biol 211 - page 1 of 23 lab 4. diffusion and osmosis in selectively permeable membranes prelab assignment before coming to lab, read carefully the introduction and the procedures for each part of the experiment, and then answer the prelab questions at the end of this lab handout. **ap lab #5 cell respiration rubric investigator's name** - ap lab #5 cell respiration rubric investigator's name\_\_\_\_\_ description points possible points scored title & date—must be appropriate 1 objective—must relate to experiment 1 background information - should include information on cell respiration, how respiration will be measured, and test organism used (subtract one point for each
