wire rope installation guide - prysmian group - construction of the rope. stranding is the number of strands per rope and the number of wires per strand (an 8-strand rope with 19 wires per strand has 8 x 19 strand-ing). determine whether the rope has 6, 8 or 9 strands by looking at the shackles where the stranding is easier to see. the rope construction (seale, warrington, filler wire, etc.) **certified to iso 9001:2000 standards - emhcranes** - wire rope hoists standard features emh hoists are available in monorail and top running double girder models to provide a price to performance ratio that compares favorably with the best the industry has to offer. **rope light wiring - wdmled** - rope light wiring 6) power up led rope light after power cable is connected to led rope light, plug it into the power outlet to light it up. led source life traditionally, the definition of life for light sources is defined at the point which 50% of the lamps fail under specified conditions. however, all necessary components in a led **api recommended practice 9b** - typical practices in the application of wire rope to oil field service are indicated in table 1, which shows the sizes and constructions commonly used. because of the variety of equipment designs, the selection of constructions other than those shown is justifiable. in oilfield service, wire rope is often referred to as wire line or cable. **rope reeving arrangements - industrial magza** - rope reeving arrangements true vertical lift is standard in almost all wire rope hoists produced by detroit hoist. rope drums are machined with left- and right hand grooves. two separate ropes are anchored at either end of the drum and are winding from the center of the drum outward. **wire rope handbook** - **wire rope suffers from being bent and the smaller the bend radius the shorter the rope life.** for a 26mm wire rope to escape bend fatigue the winch drum or block sheaves over which it runs would need a mini-mum diameter of over 1.5 metres. this is clearly impractical in many applications, and unnecessary if **wire rope & slings - lift-all** - wire rope & slings wire rope environmental considerations • wire core wire rope (iwrc) must not be used at temperatures above 400°f. • fiber core wire rope (fc) must not be used at temperatures above 180°f. • fiber core ropes should not be subjected to degreas- ing solvents. effect of anchor **wire rope 101 - hanes supply inc.** - wire rope what wire rope is... a wire rope is a piece of flexible, multi-wired, stranded machinery made of many precision parts. usually a wire rope consists of a core member, around which a number of multi-wired strands are "laid" or helically bent. there are two general types of cores for wire rope - fiber cores an wire corese **hoisting & rigging fundamentals - oshatrain** - the core is the center of the wire rope. the core serves as the foundation to hold the rope together. there are three types of cores: fiber - synthetic or sisal, which is the weakest, strand - the core is a wire strand, just like the other strands of the rope. mependent wire rope (iwrc) -this is a separate wire rope. it is the strongest of the ... **hoisting and rigging safety manual - ihsa** - • never allow wire rope slings, or any wire rope, to lie on the ground for long periods of time or on damp or wet surfaces, rusty steel, or near corrosive substances. • avoid dragging slings out from underneath loads. • keep wire rope slings away from flame cutting and electric welding. **chapter 2 rigging - manitex** - chapter 2 rigging cutting wire rope the wire rope must be tightly seized on both sides of the point where the wire rope will be cut, as shown in figure 2-1. seize the wire rope with either seizing wire or annealed wire. the seizing will prevent the wire rope strands from unraveling and prevent distortion of the rope ends from the pres- **copy of reeving - manitowoc cranes** - this reeving diagram is to be used only as a guide for reeving hookblock with multiple parts of line, correct hookblock reevin g is virtually important for safe crane operation and it is the responsibility of the crane operator to insure safe rweevin practices are followed. refer to load chart for line puul and reeving. **sheave size & wire rope strength - the crosby group** - sheave size & wire rope strength strength efficien y bending wire rope reduces its strength. to account for the effect of bend radius on wire rope strength when selecting a sheave, use the table below: fatigue life repeated bending and straightening of wire rope causes a cyclic change of stress called "fatiguing." bend radius affects **reeving - canco cranes** - reeving refers to the configuration of the wire rope, blocks and drum of the hoist. reeving effects headroom, litting speed and capacity by increasing the hoist's mechanical advantage. beeving also determines if the hoist has lateral hook movement or true vertical lift. the three terms used in reeving arc', single, double and **section 5 block s/sheave s/swivels - hanes supply inc.** - factor for wire rope to determine the minimum catalog wire rope breaking strength; consult a wire rope catalog for the corresponding grade and diameter of wire rope to match. you should also consider fatigue factors that affect wire rope life. (see "sheave size & wire rope strength"). 5. what is the speed of the line? this will help
